ABSTRACT:

Viruddhahar i.e. Incompatible or antagonistic food is one of the important concepts of Ayurvedik science and it is believed that consumption of incompatible foods (foods holding opposite properties) may lead various pathological manifestations. Variety of food incompatibilities are mentioned in Ayurvedic literature, which are not in practice now a days. But there are various new food incompatibilities, which are practiced currently in day-to-day life and produces harmful effects such as deterioration of immune system, cellular metabolism, growth hormone etc. Understanding of these food incompatibilities and there harmful effects is need of hour now. In this paper we are reviewing the concept of Viruddhahar and effort has been made to understand the incompatibility of current food articles and dietary habits with special reference to Viruddhahar.

Key words: Viruddhahar, Incompatible food, Dietary habits, Food interactions.

INTRODUCTION

Food is the basic requirement and an essential part of all living beings, considered as one of the three sub pillars in Ayurveda. The healthy body as well as the diseases depends on food we consume. According to Acharya Kashyapa, proper intake of food holds the most important position out of all the factors for maintenance of good health, because food is accepted as the basic medicament other than any substance. Though, proper intake of food provides health, in current scenario, many standards regarding food and diet regimen have been compromised and showing the overall declining status of health of individuals. According to analysis of global dietary patterns, in last two decades there is an increases in consumption of unhealthy items, food incompatibilities may be a big reason for that. Therefore it become essential to understand various types of food incompatibilities to reduce erroneous intake of food items in order to reduce burden of deteriorating health due to unhealthy food & diet. Viruddhahara (incompatible food) is one of the unique concept given by the science of Ayurveda. It includes various incompatibility regarding food and diet regimen, which hampers the
equilibrium of the **Dosha** and remain threatening to the **Dhatu** (bodily tissues).

**AIM**

To re-evaluate, discuss, and elaborate the concept of **Viruddhahar** and its various types with special reference to current food articles and dietary habit.

**MATERIAL AND METHODS**

This article is based on a review of Ayurvedic texts. Material related to **Viruddhahar** and other relevant topics have been collected. The main Ayurvedic texts used in this study are **Charak Samhita**, **Sushruta-Samhita**, **Ashtang Sangraha**, **Ashtang Hridaya**, **Bhava Prakash** and **Sharangdhara Samhita** and available commentaries on these. We have also searched various website to collect relevant information on the topic.

**Definition of Viruddhahar (Food incompatibilities):**

According to Acharya Charaka any food or medicine which when consumed displaces the **Dosha** from its place but do not expel them out of the body, is named as **Viruddha.** Dharya **Sushruta** on the other hand opined that for the formation of diseases due to **Viruddha**, not only dislodging of **Dosha** but also the lodging of **Dosha** in Rasadi **Dhatu** is important one. “The literal meaning of word **Viruddha** is opposite. So, food combinations that may have opposite or contrast properties such as fish and milk; or opposite activities on the tissues such as fruit and milk; or when processed in a specific form such as heated honey; or when combined in certain quantity such as equal amount of pure honey & ghee; or if consumed at erroneous time such as eating curd at night may exert some undesirable effect on the body and manifest as diseases. Such improper food combinations are known as **Viruddha Ahara.**

**Types of Viruddhahar (Food incompatibilities):**

**Acharya Charak** has described 18 types of **Viruddha Ahara**, which Shown in Table 1.

**Examples of Viruddha-Aahara according to Samhitas (incompatible /antagonistic food):**

- **Veerya Viruddha** - fish + milk.
- **Sanskar Viruddha** - heated honey.
- **Matra Viruddha** - honey + cow’s ghee mixed in equal proportion.
- **Krama Viruddha** - hot water after taking honey.
- **Kala Viruddha** - pungent substance in summer and cold substances in winter.

**Krama Viruddha** - consuming curd at night. taking **Madhura Rasa** food or Dravya at the end of meals taking **Tikta and Katu Rasa Dravyas** (food substances) at the starting of meals.

**Samyoga Viruddha** - fruit salad or milk + banana.

**Parihar Viruddha** - consuming cold water immediately after having hot tea or coffee.

**Disorders due to Viruddha Ahara:**

According to Acharya Charaka incompatible food if consumed in a regular fashion for long duration can lead to number of disorders, even death also. If rules for the diet are not followed then the diseases occurring due to **Viruddha Ahara** can occur, which are mentioned below:

- Impotency, **Visarpa** (erysipelas), blindness, ascitis, bullus, insanity, fistula in ano, coma or fainting, intoxication, abdominal distention, stiffness in neck, varieties of anemia, indigestions, various skin diseases, diseases of intestines, swelling, gastritis, fever, rhinitis, and infertility.

**Food incompatibilities in Present Scenario:**

Number of food incompatibilities are mentioned in Ayurvedic literature, which provides us a base to understand incompatibilities of food combinations of present scenario. For example:

1. Consumption of alcohol (possess **Ruksha & Tikshna Guna**) in arid land or having cool milkshakes juices and ice-creams (possess **Snigdha, Sheeta Guna**) in marshy lands can be considered as **Desha Viruddha Ahara**, whereas consumption of cold drinks, ice-creams, shakes in winters and excessive spicy food such as curries & gravies in summers or having food in odd times or without appetite are example of **Kaal Viruddha Ahara**.

2. Food items which are heavy to digest such as chole bhature, samosa, sweets, dahi bade should not be consumed by a person with **Mandagni**, same as spicy and low calorie food such as corn flex is **Agni Viruddha** for a Teekshanagni person.

3. Consuming yoghurt at night, having hot water after taking honey, having food without clearance of bowel and urination, having food without appetite, diëting for weight loss are much commonly seen in recent time, and these can be categorised as **Karma Viruddha.**

4. Milk and yoghurt should not be used together, as yoghurt can precipitate milk inside the stomach that may irritate and induce vomiting. It is an example of **Samyoga Viruddha**.
5. Intake of Kadaliphala (banana) and cow milk is an example of Sansyoga Viruddha, which is commonly consumed by people as shake. So it should be avoided.\textsuperscript{13}

6. Tea and milk should be avoided together, as tea contains flavonoids called catechins, which have many beneficial effects on the heart. When milk is added to tea, then a group of proteins in milk, called caseins, interact with tea to reduce the concentration of catechins, and reduces the benefits. It can be categorised as Parihar Viruddha\textsuperscript{14}

7. Betel quid, which is a combination of areca nut, betel leaf, slaked lime and tobacco is a perfect example of Samyoga Viruddha. \textsuperscript{15,16}

8. Gutkha, a mixture of areca nut, slaked lime, paraffin and catechu along with tobacco, is virtually poison as this mixture is a combination of 4000 chemicals of which at least 40 are carcinogenic compounds. It can cause non-healing ulcerative lesions in oral cavity. It can also produce noncancerous conditions such as bronchial asthma, hypertension, heart disease, narrowing of the blood vessels, stroke etc. It can be categorized Samyoga Virrudha Ahara.\textsuperscript{17}

9. The present fast food processing can be taken in the category of Sanskar Viruddha, where many harmful chemical and preservatives are used for commercial purpose, compromising with the heath of the population.

10. Tea & Garlic both have anticlotting properties, together they may increase the risk of bleeding. So, tea and garlic should be avoided together.\textsuperscript{18}

11. White sauce commonly used in fast food, is a combination of cream, milk and salt, which is also an unhealthy preparation as milk is clearly contraindicated with salt.

12. Pomegranate juice and grapefruit juice, both are known to block the cytochrome P450 3A4 enzyme systems in the intestines and increase blood levels of many medications being taken. Having these two juices together may enhance the above action.\textsuperscript{19}

13. Consuming salty snacks along with milk or coffee is also not recommended. Yogurts are also popular breakfast food, and so is coffee; yogurt followed with hot coffee should be avoided.

14. Eating potato chips regularly is Sanskara Viruddha. Deep frying of potatoes can develop toxic substances, such as acrylamide, which can prove to be carcinogenic.\textsuperscript{20}

15. Oil and food must not be reheated. Reheating creates more oxidation and if consumed may create more oxidative stress creating more free radicals which are hazardous to health.\textsuperscript{21}

16. Studies shows that use of high grade temperature in microwave for heating the food products results in formation of acrylamide that is recognised as a “potentially carcinogenic” compound.\textsuperscript{22}

17. There are so many examples of food and drug interactions which can be categorized in Upachara viruddha. Such as
   -Grape fruit juice possesses high interaction with almost all types of drugs. It modifies metabolism of the medication, affects the ability of liver to work on the medication.\textsuperscript{23}
   -Patients taking anti hypertensive medicines will benefit from concomitant low sodium diets. So food items rich in sodium are restricted with anti-hypertensive medicines.\textsuperscript{24}
   -Analgesics and antipyretics, NSAIDs like ibuprofen, naproxen, ketoprofen and others should be taken with food or milk as they may cause stomach irritation. Avoid or limit the use of alcohol because chronic alcohol use can increase the risk of liver damage or stomach bleeding.\textsuperscript{25}

Mode of action: According to Ayurveda regular and prolong consumption of Viruddhahara. Vitiates agni (digestive power), leads to indigestion i.e. the individual become unable to digest even the lightest consumed food, this undigested food turns sour and acts like a poison designated as Amavisha in Ayurveda. Amavisha hampers the proper functioning Strotas and leads to improper production of Dhatus, resulting in deprivation of Vyadhikshamattva i.e. immunity, and manifests as various disorders.(Flow Chart 1)

CONCLUSION

An old idiom states “you are what you eat” shows the importance of proper intake of food to stay healthy. But now a days food habits are so erroneous. Faulty food habits, addictions are part of new life style which negatively affects the health status. Concept of Viruddha (incompatibility) is one such principle of Ayurveda under the umbrella of which such newly adopted faulty and harmful food and diet combination could be placed. Avoidance of these food incompatibilities can be applied only when we are aware about them. So it can be concluded that a
properly taken balanced diet is the key of health, and the best medicament, and to accomplish a balanced diet one should know about various incompatible foods and try to avoid them.
